

Located in Johannesburg, our core business is tube laser cutting and contract manufacturing to our customers' specific designs using our BLM tube laser machines, robotic welders and 3-dimensional drawing software.

Using this technology, we are manufacturing a practical but stylish foot operated stainless steel hand sanitizer dispenser.

The unit is available in 3 sizes, from the smallest unit for use in creches and primary schools, medium units for regular traffic areas such as shops, offices, medical facilities and retirement villages, and large for industrial use. All components are made in high grade stainless steel and are adjustable to cater for all sanitizer bottle sizes, kept secure via a lockable top panel.

STEEL SOLUTIONS

IS A LEADING SOUTH AFRICAN STEEL FABRICATOR

FOOT OPERATED SANITIZER DISPENSER
