## Press Release

### Indy Oil introduces Industrial Surface Sanitizer to its range

Local lubricant blender, Indy Oil, has formulated a water based industrial surface sanitizer to disinfect, sanitize and deodorize non-porous surfaces for a germ-free environment that is healthy and safe.

It contains an FDA, EPA, NSF approved active ingredient proven to be effective against encapsulated viruses such as the human coronavirus as well as a wide range of microbes, bacteria and pathogens.

The Indy Oil Surface Sanitizer is suitable to be used in factories, on machinery and equipment, in hospitals, nursing homes and offices. It is also food safe making it perfect for use in food processing factories, restaurants and bars, where frequent disinfecting of equipment and surfaces is essential to meet strict health and safety regulations. In addition, the product is non-flammable.

Public transport vehicles like buses and taxis also benefit from the powerful disinfectant properties of the Indy Oil Industrial Surface Sanitizer as it can be used to clean seats, dashboards, door handles, hand railings, seatbelts and rubber floor mats to prevent the spread of the human coronavirus from passenger to passenger.

“Indy Oil has customers across a range of industries and it was important to us to develop a product that will assist them in fighting the COVID-19 pandemic. Alcohol based sanitizers are high risk in certain operations due to flammability, making their use dangerous in many commercial and factory settings. Alcohol based sanitizers also do not provide residual protection. In order to have constant surface protection using an alcohol based sanitizer more frequent applications is required to be effective in disinfecting germs and bacteria. The Indy Oil Surface Sanitizer is water based so there is no fire risk, while its high medical grade formulation ensures safe and effective disinfection of surfaces such as worktops, floors, walls, furniture and equipment.” says Jayne Bhanjan, Indy Oil Technical Manager.

“The Indy Oil Surface Sanitizer is a ready to use disinfectant that can be applied directly onto surfaces which may be wiped or washed off with water after a maximum contact time of ten minutes. It offers peace of mind to our customers and the public that are exposed to areas of high traffic volumes including communal kitchens, bathrooms, reception and security areas.” explains Bhanjan.

The Indy Oil Industrial Surface Sanitizer is available in 5L, 20L and 1000L flow bins. For more information about the product and how to order, visit [www.indyoil.co.za](http://www.indyoil.co.za)

Ends.
