

THE BRAND NEW MYXCHANGE PLATFORM.

Your technology partner for Industry 4.0 and beyond.

VSC has embarked on a journey to consolidate all products into a single sign on Web platform known as the Virtual Supply Chain (VSC) Portal. The Virtual Supply Chain will enable trading partners to interact with orders, arrange the distribution of goods and sign on glass via a mobile application in a single integrated platform, resulting in a Smart Supply Chain.

We are very excited to inform you of the launch of our brand new MyXchange module, which is also part of our VSCPortal. The new module will allow us to further deliver against the MISCCIP (Motor Industry Supply Chain Competitiveness Improvement Programme) commitments we made in partnership with NAACAM, NAAMSA, DTI & the AIDC to the South African Automotive Industry.

The new module will be operational from January 2021; all existing users will be on-boarded in phases of which we'll share details in due course.

What is new?

Everything, this is not merely an update to the existing platform, it is a complete redesign from the ground up, including the data integration layers. We have made use of the latest in technologies to ensure we are geared for Industry 4.0 and beyond.

Why the update?

- Improved data analytics helping you to turn your data into valuable information
- To enable Industry 4.0 related demands from a technology standpoint such as smart sensors, smart devices and the Internet of Things in general
- To make our platform available on more devices such as smartphones or tablets
- To ensure we provide our clients with the best in what technology has to offer including best of breed security protocols.

What has changed?

We tried to find a balance between the look & feel of the current platform and that which modern design dictates.

- Brand new Login page known as the "VSC Portal", the MyXchange module resides within the VSC Portal
- Predefined dashboards are now available as standard
- New and improved reporting abilities
- Some navigational changes to make working with the data easier
- More visual enhancements and dashboards to allow the user to dictate what they would like to see and view
- Improved audit tracking of data related activities

When is this happening?

- We have started engagements with the OEMs via Webinars in the final stages of 2020 and will continue in early January 2021 post start up
- We can start migrating customers over from mid-January 2021

What is expected from me / my organisation?

- If you are not the correct recipient of this letter, please share this with the correct department / members within your organisation
